EDUCATION

University of Naples Federico II | October 2025 – Present
MSc in Data Science — Naples, Italy

The Neotia University | September 2021 – July 2025
B.Tech in Computer Science and Engineering, Specialization in Cyber Security — Diamond Harbour, India

- Grade: 77.42%

EXPERIENCE

Unified Mentor Pvt. Ltd. | January 2025 – July 2025
Web Developer Intern

- Built responsive web applications for [product/client], improving [X]% of core user flows and reducing [page-load time / bug reports] by [X]%.
- Implemented [N] frontend features end-to-end using [React/HTML-CSS-JS], collaborating with a team of [N] developers.

Think Again Lab. | June 2024 – August 2024
Web Developer Intern

- Shipped [N] cross-platform features in React and Flutter, reducing [rendering time / crash rate / manual QA effort] by [X]%.
- Improved [specific UI/UX metric, e.g. load time, navigation flow] across [N] app screens based on user feedback.

YBI Foundation | May 2023 – July 2023
Machine Learning Intern

- Built [N] supervised ML models (e.g. regression/classification) in Python, achieving [X]% accuracy/F1 on [dataset name].

AICTE / IBM SkillsBuild
Cyber Security Intern

- Built a keylogger project in Python to demonstrate [specific vulnerability/detection technique], as part of an introductory cybersecurity curriculum.

PROJECTS

Real-Time Tweet Sentiment Analysis
PySpark · Apache Kafka · Python

- Built a real-time sentiment-analysis pipeline processing [X] tweets/sec, classifying sentiment with [X]% accuracy using [model/library].
- Designed a Kafka-based streaming architecture feeding a PySpark pipeline, reducing end-to-end latency to [X seconds/ms] at [X] messages/sec.

Bibliometric ETL
Python · Data Engineering · ETL

- Built an ETL pipeline processing [X] bibliometric records from [source], automating extraction and transformation that previously took [X hours/manual effort].
- Structured a modular ETL workflow (extract → transform → load) in Python, enabling [reuse/scalability/specific downstream use case].

Cardiac Disease Detection
Python · Pandas · TensorFlow · Keras · CNN · Matplotlib

- Built an ECG image classification pipeline (MobileNetV2) across 4 cardiac conditions (~900 images); discovered and corrected patient-level data leakage in the source dataset via OCR-based patient-ID extraction, then validated with patient-grouped 5-fold cross-validation, bootstrap confidence intervals, and Grad-CAM interpretability analysis.
- Found frozen-embedding classifiers (Logistic Regression) outperformed fine-tuned CNN layers (0.75 vs. 0.64 macro-F1), and selected the methodologically sound model over the naive best-accuracy pick — supported by calibration analysis and kNN-based error diagnostics.

Voice-to-Query
Python · Data Processing

- Built a voice-to-query pipeline converting speech input into structured queries using [speech-to-text tool/library], achieving [X]% transcription/intent accuracy.

TECHNICAL SKILLS

Languages: Python, SQL, C, JavaScript
Data Science: NumPy, Pandas, Matplotlib, Scikit-learn
Machine Learning: TensorFlow, Keras, CNN, Scikit-learn
Big Data & Data Engineering: PySpark, Apache Kafka, ETL
Databases: SQL, MongoDB
Development & Tools: Git, GitHub, Docker, Linux
Foundations: Data Structures & Algorithms, Operating Systems, Computer Networking

LANGUAGES

English, Bengali, Hindi
